

**TPMS scan tool  
KTI-71987**

The TPMS scan tool allows for more in-depth analysis by accessing the vehicle's TPMS control module. The scanner registers sensor IDs so the user can relearn many Asian vehicles. The tool also reads TPMS datastreams, reads and clears TPMS diagnostic codes (DTCs) and enables downloading and printing of captured TPMS data. The tool has TPMS reference information "on-board," viewable on bright, color display.
